

## Computing

At Redlands Primary School, we provide an ICT curriculum in which pupils are taught the principles of computer science, digital technology and, with the new curriculum, the introduction of computer programming. Our curriculum aims to ensure that pupils become digitally literate and are able to use this knowledge safely within the computing world.

Our curriculum includes a wide range of units covering the new curriculum strands of:

- digital literacy
- computer science
- information technology

Each class has two weekly slots in the ICT suite, with the use of ICT integrated across the curriculum.

Our school website has links to our Year Group Blogs which are updated with key events.
